

Eco-Hub

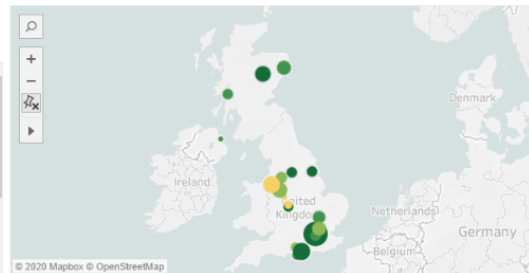

Apollo Energy's Eco-Hub is an easy-to-use application which allows you to monitor and manage your business energy profile. This bespoke control panel is fully scalable and responds to changes in your operations and portfolio, giving you the opportunity to explore and implement energy saving opportunities and track their success.

The Eco-Hub can assist your business to meet its environmental targets by providing accessible & visually engaging insights into its energy profile and usage patterns.

League Table Data

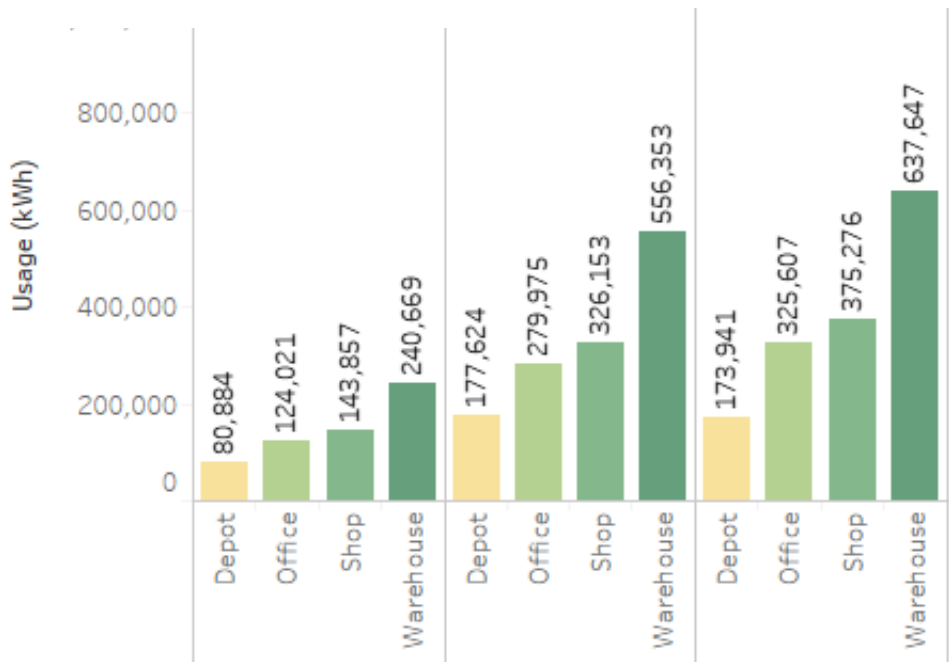

Site Name	Total Cost	Usage (kWh)
Site 1	£94,874	639,904
Site 2	£163,309	1,088,358
Site 3	£188,669	1,307,742
Site 4	£120,842	836,843
Site 5	£51,712	349,995
Site 6	£81,426	594,002
Site 7	£146,941	1,047,074
Site 8	£187,429	1,248,564
Site 9	£216,279	1,569,823
Site 10	£474,160	3,104,599
Site 11	£91,166	628,238
Site 12	£104,952	711,012

Did you know...

Businesses can save up to 10% on their gas and electricity usage by applying a monitoring and targeting scheme as part of a broader energy management program.

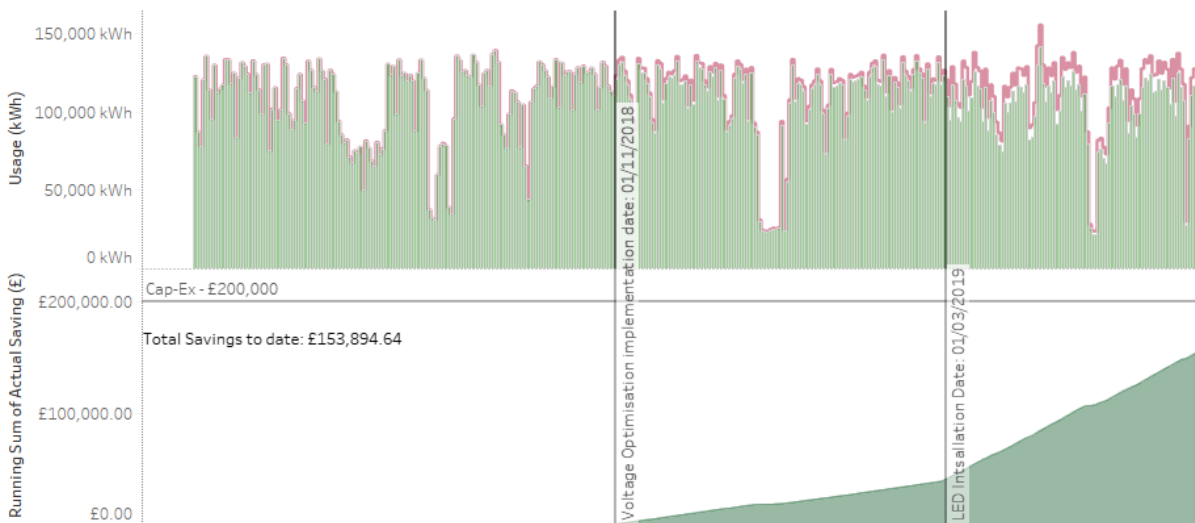

Identify Usage Profiles

By combining high-level, company wide league tables and analysis with pioneering, in-depth meter level analysis, you can target the biggest energy users within your organisation and drill into their usage patterns. Our expert consultants will work with you and identify energy reduction opportunities that will save money and, crucially, reduce your carbon footprint.

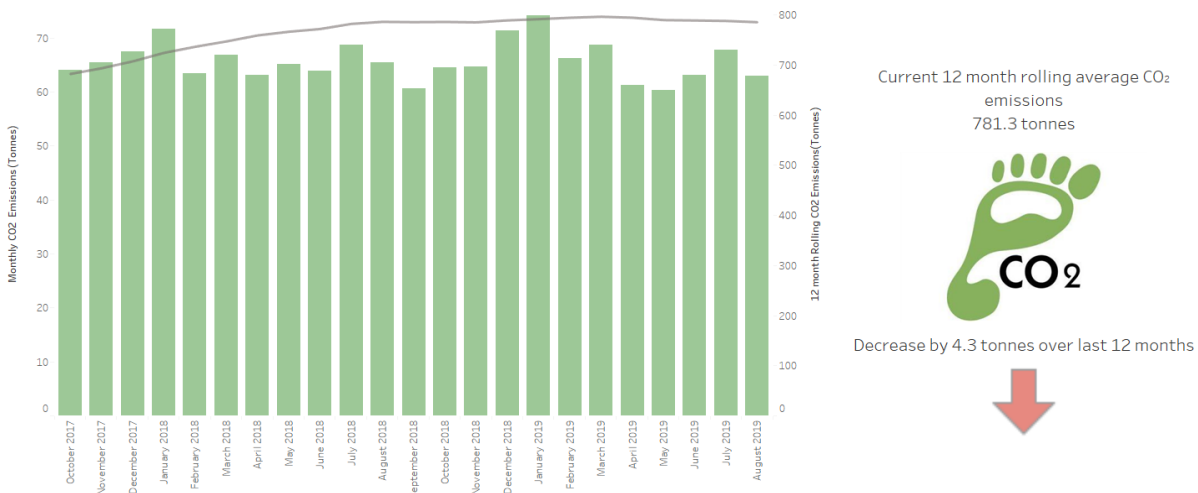

Projections

With Eco-Hub, you can forecast the impact of energy saving solutions, allowing you to project future savings and set targets to ensure you are seeing a return on your overall investment. Savings are independently tracked and validated, keeping you in control. Successful projects can also be scaled up, applying projections to your wider portfolio, preparing you for any future expansion or usage changes.

Reduce Carbon Footprint

The responsibility of all organisations to reduce their carbon footprint has never been greater, with the added pressures of corporate responsibility and government legislation tightening time frames to achieve targets.

Eco-Hub monitors your Carbon Emissions and will create benchmarks to ensure your business is on track to become net zero carbon.

Additional Information

As well as our market leading Eco Hub, Apollo Energy can also assist in many other areas of your business.

We can assist you with legislation such as Streamlined Energy and Carbon Reporting (SECR) and the Energy Savings Opportunity Scheme (ESOS), as well as arranging carbon footprint audits at each of your sites, ensuring every area of your business is covered in terms of its environmental commitments.
